

# ThePestigator®

## Injection Pump for Irrigation Systems

THE PESTIGATOR DELUXE MODEL is fully automated and operates in a "window of opportunity" using the irrigation systems already existing control panels to deliver the MSC insect control solution into the water stream of each zone and sprinkler head. This is accomplished by using wireless solenoid valves triggered by a battery operated timer that opens and closes the electronic valves and diverts the water supply through the Pestigator Injection Pump at designated times when the irrigation system is not programmed to operate.
